

Something Never Changes

SNC Introduction

In **Something Never Changes (SNC)**, the aim is to identify the quantities that do not change in value throughout the question. It can be one of the subjects, the total or the difference. We usually use ratio to compare them and make the quantity that does not change to be the same throughout.

Tip: Examples of problems involving totals that do not change are giving and receiving among one another while those involving differences that do not change are usually age-type questions as well as questions where subjects receive the same benefits/penalties.

SNC Example

The ratio of A's cookies to B's cookies was 1 : 2 at first.
After A ate 5 cookies, the ratio became 1 : 4.
How many cookies did A have at first?

At first In the end

A : B A : B

1 : 2 1 : 4

B never changed.

$\times 2 \left(\begin{array}{l} 1 : 2 \\ \downarrow \\ 2 : 4 \end{array} \right) \times 2$ 1 : 4

A (ate) $\rightarrow 2 - 1 = 1$ unit

$\rightarrow 5$ cookies

1 unit $\rightarrow 5$ cookies

2 units $\rightarrow 2 \times 5 = 10$ cookies

A (at first) $\rightarrow 10$ cookies

Ans: 10 cookies

Question 1

A is j years old. B is 4 times as old as A. How long will B be twice as old as A in terms of j ?

Ans: _____

Question 2

The ratio of A's cookies to B's cookies was $7 : 4$. After A gave 200 cookies to B, the ratio became $5 : 6$. What fraction of her cookies did A give to B?

Ans: _____

Question 1

Now	Future
A : B	A : B
1 : 4	1 : 2

Difference never changes.

A : B	Difference	A : B	Difference
1 : 4	3	$\begin{matrix} 1 : 2 \\ \times 3 \swarrow \quad \searrow \times 3 \\ 3 : 6 \end{matrix}$	$\begin{matrix} 1 \\ \times 3 \searrow \\ 3 \end{matrix}$

A (now) \rightarrow 1 unit

\rightarrow j years

Time $\rightarrow 6 - 4 = 2$ units

$\rightarrow 2 \times j = 2j$ years

Ans: 2j years

Question 2

At first	In the end
A : B	A : B
7 : 4	5 : 6

Total never changed.

A : B	Total	A : B	Total
7 : 4	11	5 : 6	11

A (gave) $\rightarrow 7 - 5 = 2$ units

\rightarrow 200 cookies

2 units \rightarrow 200 cookies

1 unit $\rightarrow 200 \div 2 = 100$ cookies

7 units $\rightarrow 7 \times 100 = 700$ cookies

A (at first) \rightarrow 700 cookies

Fraction (A gave) $\rightarrow \frac{200}{700} = \frac{2}{7}$

Ans: $\frac{2}{7}$
