“What is gravity?” asked seven-year-old Nicholas, scratching his head. Then he pointed to the word in a science book he was reading.

“We cannot see it **1** _____ we would know if it isn’t there. We can see its effects on objects around us. If a pen rolls off a table, it will drop to the floor. If a fruit is ripe, it will fall to the ground,” Jason explained **2** _____ a smile.

“Yes, everything would float off into space like lost balloons **3** _____ the Earth’s gravity tugging them **4** _____,” chipped in Janet.

“Oh, I understand now. It is a kind **5** _____ force that attracts everyone and everything **6** _____ the centre of the earth, am I right?” exclaimed Nicholas excitedly.

“Yes, you’re right. However, gravity does more than just keeping people and objects on earth **7** _____ floating away. It is the earth’s gravity that holds the moon **8** _____ it revolves around the earth. You can do an experiment to show how gravity holds the moon in orbit around the earth. First, you get a tennis ball. Tie a string around **9** _____ securely. Then you take the end of the string and swing it around your head. The tennis ball is likened to the moon and you, the earth. Gravity from the earth is like **10** _____ invisible piece of string that prevents the moon from flying away from the earth,” their mother explained further.
